Learning Outcomes:

Upon successful completion of this course, students will be able to:

1. Describe pathophysiology as it relates to common presentations of illness.
2. Give examples of cellular alterations.
3. Describe the inflammatory and reparative processes.
4. Explain the physical and psychosocial stressors.
5. Explain the following terms contributing to alterations in body function: inflammation, infection, obstruction/ occlusion, genetics, congenital, cancer, traumatic injury, degeneration.
6. Explain compensatory and decompensatory mechanisms.
7. Describe chronic versus acute illness in the context of disease (health continuum and disease versus illness).
8. Identify the nursing management of disease and illness for body systems across the lifespan.
9. Identify holistic and traditional healing practices associated with common illness.
10. Define the influence of cultural diversity in health and healing.
11. Identify appropriate evidence-informed research and practice resources.
