**Learning Outcomes**

Upon successful completion of this course, students will be able to:

1. Describe the metabolic pathways associated with primary metabolite synthesis and degradation.
2. Explain how primary metabolic pathways are interconnected.
3. Explain the importance of secondary metabolism and why it differs between species.
4. Discuss the relationship between hormones, metabolism, and human health.
6. Predict the metabolic consequence of a defect in a specific biochemical pathway.
7. Analyze metabolic data sets in the context of human health.
8. Collaborate with a team of other students to analyze metabolic data sets.
9. Communicate conclusions drawn from metabolic data analysis in a written report.
