

COURSE IMPLEMENTATION DATE:	<u>September 2003</u>
COURSE REVISED IMPLEMENTATION DATE:	<u>September 2009</u>
COURSE TO BE REVIEWED:	<u>January 2013</u>
<i>(four years after UPAC approval)</i>	<i>(month, year)</i>

OFFICIAL COURSE OUTLINE INFORMATION

Students are advised to keep course outlines in personal files for future use.
 Shaded headings are subject to change at the discretion of the department – see course syllabus available from instructor

CHEM 110	Chemistry	4
COURSE NAME/NUMBER	FACULTY/DEPARTMENT	UCFV CREDITS
Introductory Chemistry		
COURSE DESCRIPTIVE TITLE		

CALENDAR DESCRIPTION:

This course covers the principles of chemical kinetics and thermodynamics, redox processes, electrochemistry, and chemistry of solutions, including solubility and acid-base equilibria. It can be used as a prerequisite for CHEM 113 by students without Chemistry 12.

PREREQUISITES: Chemistry 11 or CHEM 083; and Principles of Math 11 or MATH 085, or equivalent
 COREQUISITES:
 PRE or COREQUISITES:

SYNONYMOUS COURSE(S):

(a) Replaces: _____
 (b) Cross-listed with: _____
 (c) Cannot take: _____ for further credit.

SERVICE COURSE TO: *(department/program)*

TOTAL HOURS PER TERM: 84

STRUCTURE OF HOURS:

Lectures: 45 Hrs
 Seminar: _____ Hrs
 Laboratory: 39 Hrs
 Field experience: _____ Hrs
 Student directed learning: _____ Hrs
 Other (specify): _____ Hrs

TRAINING DAY-BASED INSTRUCTION:

Length of course: _____
 Hours per day: _____

OTHER:

Maximum enrolment: 36
 Expected frequency of course offerings: every semester
(every semester, annually, every other year, etc.)

WILL TRANSFER CREDIT BE REQUESTED? (lower-level courses only)	<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No
WILL TRANSFER CREDIT BE REQUESTED? (upper-level requested by department)	<input type="checkbox"/> Yes	<input type="checkbox"/> No
TRANSFER CREDIT EXISTS IN BCCAT TRANSFER GUIDE:	<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No

Course designer(s): Noham Weinberg	Date approved: March 5, 2008
Department Head: Arthur Last	Date of meeting: December 5, 2008
Supporting area consultation (UPACA1)	Date approved: January 9, 2009
Curriculum Committee chair: Norm Taylor	Date approved: January 13, 2009
Dean/Associate VP: Dan Ryan	Date of meeting: January 30, 2009
Undergraduate Program Advisory Committee (UPAC) approval	

LEARNING OUTCOMES:

Upon successful completion of this course, students will be able to:

Apply basic concepts of chemical kinetics, and thermodynamics and the principles of aqueous equilibria at a level sufficient to enroll in Chemistry 113.

Perform basic laboratory operations.

METHODS: *(Guest lecturers, presentations, online instruction, field trips, etc.)*

Lectures, labs, group problem-solving sessions.

METHODS OF OBTAINING PRIOR LEARNING ASSESSMENT RECOGNITION (PLAR):

Examination(s) Portfolio assessment Interview(s)

Other (specify): Theoretical and laboratory exams

PLAR cannot be awarded for this course for the following reason(s):

TEXTBOOKS, REFERENCES, MATERIALS:

[Textbook selection varies by instructor. An example of texts for this course might be:]

Ebbing et al., Essentials of General Chemistry (latest edition)

UFV Lab manual for Chem 110

STUDENT EVALUATION:

[An example of student evaluation for this course might be:]

Labs	20%
Assignments and tests	80%
including:	
Final exam	40-50%
Midterm exam(s)	20-30%
Assignments	0-10%

COURSE CONTENT:

[Course content varies by instructor. An example of course content might be:]

Solutions

Concentration. Dilution. Electrolytes and Nonelectrolytes.
Arrhenius theory of electrolytic dissociation. Ionic equations. Solution stoichiometry.

Gases

Units of pressure. Ideal gas equation. Dalton's Law of partial pressures. Basic principles of Kinetic Molecular Theory of Gases.

Chemical kinetics

Rate of reaction. Rate laws. Rate constant. First- and second-order reactions. Principles of collision theory. Temperature dependence of the rate constant. Activation energy. Arrhenius equation. Multistep processes. Energy profiles for multistep processes. Intermediates. Rate-limiting step. Catalysis. Energy profiles for catalyzed and uncatalyzed reactions.

Chemical equilibria

Reversible reactions. Chemical equilibrium. Equilibrium constant. Reaction quotient. Calculation of equilibrium concentrations.
Factors that affect chemical equilibrium. Le Châtelier's Principle.

Solubility

Molecular view of solution process. Enthalpy and entropy of dissolution. Solubility equilibrium. Solubility. Effect of temperature on solubility of solids and gases. Effect of pressure on solubility of gases. Solubility product. Solubility calculations. Common ion effect.

Acids and Bases

Brønsted-Lowry theory. Conjugate acid-base pairs. Acid-base properties of water. The ion product of water. pH, pOH, and pK_w . Strong and weak acids and bases. Ionization constants K_a and K_b . Relationship between K_a and K_b . Acid-base titration. Acid-base properties of salts. Hydrolysis (qualitatively).

Thermodynamics

Energy changes in chemical reactions. Exothermic and endothermic reactions. Hess' Law. Thermochemical calculations. Energy and enthalpy. Enthalpy changes in chemical reaction. Standard enthalpy of formation and reaction. Concept of Entropy. Gibbs free energy. Spontaneous and nonspontaneous processes.

Redox reactions and electrochemistry

Oxidation number. Oxidation. Reduction. Half-reactions. Balancing redox reactions (half-reaction method; acidic and basic solutions). Galvanic cells. Standard reduction potential. Spontaneity of redox processes. Batteries. Corrosion. Electrolysis (aqueous solutions, molten salts, active and inactive electrodes). Quantitative aspects of electrolysis.

Laboratory experiments will illustrate theoretical material and may include the following experiments:

- Experiment 1: Preparation of Solutions
- Experiment 2: Spectrophotometric Study of an Unknown Copper Compound
- Experiment 3: Thermochemistry: Heats of Reaction
- Experiment 4: Chemical Equilibrium: Equilibrium Investigations and Le Châtelier's Principle
- Experiment 5: Equilibrium: The Determination OF K_{sp} Values for Calcium iodate
- Experiment 6: Acids, Bases and Buffered Systems
- Experiment 7: Potentiometric Titrations: Analysis of a Wine-Vinegar Sample and of Ammonia Solution
- Experiment 8: Oxidation-Reduction Titrations - Determination of the Empirical Formula of a Hydrate $Cu(NO_3)_2 \cdot X H_2O$
- Experiment 9: Activity Series, Electrochemical and Electrolytic Cells
- Experiment 10: Factors Affecting Reaction Rate
