

OFFICIAL UNDERGRADUATE COURSE OUTLINE FORM

Note: The University reserves the right to amend course outlines as needed without notice.

Course Code and Number: CHEM 311		Number of Credits: 4 Course credit policy (105)															
Course Full Title: Intermediate Organic Chemistry I Course Short Title: Intermediate Organic Chem. I <i>(Transcripts only display 30 characters. Departments may recommend a short title if one is needed. If left blank, one will be assigned.)</i>																	
Faculty: Faculty of Science		Department (or program if no department): CHEMISTRY															
Calendar Description: <p>An intermediate-level organic chemistry course involving a detailed study of the influence chemical structure has on reaction outcomes. Covers stereoelectronics, stereoselectivity in ring systems, and diastereoselectivity in detail, and introduces more contemporary knowledge topics such as organometallic synthesis.</p>																	
Prerequisites (or NONE):		CHEM 213 and CHEM 214.															
Corequisites (if applicable, or NONE):		NONE															
Pre/corequisites (if applicable, or NONE):																	
Antirequisite Courses <i>(Cannot be taken for additional credit.)</i> Former course code/number: Cross-listed with: Dual-listed with: Equivalent course(s): <i>(If offered in the previous five years, antirequisite course(s) will be included in the calendar description as a note that students with credit for the antirequisite course(s) cannot take this course for further credit.)</i>		Special Topics This course is offered with different topics: <input checked="" type="checkbox"/> No <input type="checkbox"/> Yes <i>(Double-click on box to select it as checked.)</i> If yes, different lettered courses may be taken for credit: <input checked="" type="checkbox"/> No <input type="checkbox"/> Yes, repeat(s) <input type="checkbox"/> Yes, no limit <i>(The specific topic will be recorded when offered.)</i>															
Typical Structure of Instructional Hours <table border="1" style="width: 100%; border-collapse: collapse;"> <tr> <td>Lecture/seminar hours</td> <td style="text-align: center;">45</td> </tr> <tr> <td>Tutorials/workshops</td> <td></td> </tr> <tr> <td>Supervised laboratory hours</td> <td style="text-align: center;">45</td> </tr> <tr> <td>Experiential (field experience, practicum, internship, etc.)</td> <td></td> </tr> <tr> <td>Supervised online activities</td> <td></td> </tr> <tr> <td>Other contact hours: Exams</td> <td></td> </tr> <tr> <td style="text-align: right;">Total hours</td> <td style="text-align: center;">90</td> </tr> </table>		Lecture/seminar hours	45	Tutorials/workshops		Supervised laboratory hours	45	Experiential (field experience, practicum, internship, etc.)		Supervised online activities		Other contact hours: Exams		Total hours	90	Transfer Credit Transfer credit already exists: <i>(See bctransferguide.ca.)</i> <input checked="" type="checkbox"/> No <input type="checkbox"/> Yes Submit revised outline for rearticulation: <input type="checkbox"/> No <input checked="" type="checkbox"/> Yes <i>(If yes, fill in transfer credit form.)</i>	
Lecture/seminar hours	45																
Tutorials/workshops																	
Supervised laboratory hours	45																
Experiential (field experience, practicum, internship, etc.)																	
Supervised online activities																	
Other contact hours: Exams																	
Total hours	90																
Labs to be scheduled independent of lecture hours: <input type="checkbox"/> No <input checked="" type="checkbox"/> Yes		Grading System <input checked="" type="checkbox"/> Letter Grades <input type="checkbox"/> Credit/No Credit															
Department / Program Head or Director: Dr. Cory Beshara		Date approved: May 18, 2018															
Faculty Council approval		Date approved: September 7, 2018															
Dean/Associate VP: Dr. Lucy Lee		Date approved: September 7, 2018															
Campus-Wide Consultation (CWC)		Date of posting: n/a															
Undergraduate Education Committee (UEC) approval		Date of meeting: October 26, 2018															

Learning Outcomes:

Upon successful completion of this course, students will be able to:

1. Utilize chemical models and theory to approach a multi-faceted problem in organic synthesis.
2. Use resources to apply the basic principles underlying organic chemistry and apply them to new situations using a systematic and logical approach (e.g., in reaction syntheses).
3. Perform laboratory syntheses and analyses with care, precision, and confidence
4. Produce laboratory procedures independently.
5. Extrapolate information obtained in class sessions into the laboratory.
6. Describe the usefulness of organometallic reagents in their very broad applicability.

Prior Learning Assessment and Recognition (PLAR)

Yes No, PLAR cannot be awarded for this course because

Typical Instructional Methods (*Guest lecturers, presentations, online instruction, field trips, etc.; may vary at department's discretion.*)

Presentation of the course will be by inter-related class (theory), seminar, and laboratory sessions. Class sessions will promote active student participation to ensure continual mutual feedback in order to reinforce the learning process. Problem assignments will be continually given. Some selected problems will be collected and marked.

NOTE: The following sections may vary by instructor. Please see course syllabus available from the instructor.

Typical Text(s) and Resource Materials (*If more space is required, download Supplemental Texts and Resource Materials form.*)

Author (surname, initials)	Title (article, book, journal, etc.)	Current ed.	Publisher	Year
1. Clayden, J.; Greeves, N.; Warren, S.	Organic Chemistry 2 nd edition	<input checked="" type="checkbox"/>	Oxford Univ. Press	2012
2.		<input type="checkbox"/>		
3.				
4.		<input type="checkbox"/>		
5.		<input type="checkbox"/>		

Required Additional Supplies and Materials (*Software, hardware, tools, specialized clothing, etc.*)**Typical Evaluation Methods and Weighting**

Final exam:	35%	Assignments:	15%	Field experience:	%	Portfolio:	%
Midterm exam:	30%	Lab Work	20%	Practicum:	%	Other:	%
Quizzes/tests:	%	Term Paper:	%	Presentation:	%	Total:	100%

Details (if necessary):**Typical Course Content and Topics****Chemoselectivity: Clayden**

Allows for a review while learning a new concept (chemoselectivity).

Saturated heterocycles and stereoelectronics

An introduction to Baldwin's Rules and an exploration of molecular orbital geometries that arise to explain this empirically derived paradigm.

Stereoselectivity in cyclic molecules

A study of molecular shape the effect of shape on transition state energies. Students learn in finer detail what stereoselectivity is and various conformational analysis methods to visualize this issue.

Diastereoselectivity

Students will be exposed to the effect a proximal stereocenter will have on a reaction site. Students will be introduced to Cram's Rule, Felkin/Ahn's re-interpretation, and the chelate rule. Time permitting, students will also study asymmetric synthesis through utility of the CBS reagent and the production of diastereomeric transition states in reactions involving molecules with no stereocenters.

Organometallic chemistry

Students will explore Pd-catalyzed carbon-carbon bond formation and discover its near ubiquitous use in contemporary synthesis.
