FACULTY/DEPARTMENT: CHEMISTRY DEPARTMENT

CHEM 455 **3**

COURSE NAME/NUMBER CHEMISTRY OF BIOLOGICAL AND SYNTHETIC POLYMERS FORMER COURSE NUMBER _____ UCFV CREDITS _____

CHEMISTRY OF BIOLOGICAL AND SYNTHETIC POLYMERS

COURSE DESCRIPTIVE TITLE

CALENDAR DESCRIPTION:

The course concentrates on: (a) the chemistry of synthetic organic, inorganic and biomedical polymers, with emphasis on polymerization reactions; the characterization, structure and properties of polymers and their role in industrial processes and (b) the chemistry of naturally occurring organic and inorganic polymers, with emphasis on the extraction and purification, characterization, structure and properties of proteins, nucleic acids, polysaccharides, cellulose, chitin, rubber and lignin and their role in biological processes.

PREREQUISITES: CHEM 211/212

COREQUISITES: None

SYNONYMOUS COURSE(S) [

(a) Replaces: N/A

(Course #)

(b) Cannot take N/A for further credit [

(Course #)

SERVICE COURSE TO:

[

(Department / Program)

[

(Department / Program)

TOTAL HOURS PER TERM: 42

STRUCTURE OF HOURS:

Lectures: 42 hrs
 Seminar: _____ hrs
 Laboratory: _____ hrs
 Field Experience: _____ hrs
 Student Directed Learning: _____ hrs
 Other (Specify): _____ hrs

TRAINING DAY-BASED INSTRUCTION

LENGTH OF COURSE: _____

HOURS PER DAY: _____

MAXIMUM ENROLMENT: 24

EXPECTED FREQUENCY OF COURSE OFFERING: _____

WILL TRANSFER CREDIT BE REQUESTED? YES _____ NO X

TRANSFER CREDIT EXISTS IN BCCAT TRANSFER GUIDE: YES _____ NO X

AUTHORIZATION SIGNATURES:

Course designer(s): L. Spier Chairperson: _____
 Department Head: N. Weinberg Dean: K. Wayne Welsh
 PAC Approval in Principle Date: _____ PAC Final Approval Date: November 24, 1999
 (Curriculum Committee)

LEARNING OBJECTIVES / GOALS / OUTCOMES/ LEARNING OUTCOMES:

The course is designed to enable students to appreciate the significance of polymer chemistry in all aspects of modern life, and to investigate and understand:

CHEM 455COURSE NAME / NUMBER

1. The applications of organic and inorganic chemistry to the preparation, properties and structures of polymers.
2. The use of physical methods to test and characterize polymers.
3. The relationship between structure and properties of polymers.
4. Industrial polymer technology.
5. The preparation and properties of biomedical polymers.

METHODS:

Presentation of the course will be by inter-related theory classes ("lectures") and discussion periods ("seminars"). Audio-visual aids will be used where appropriate. Students will be expected to be conversant with the use of an academic library.

PRIOR LEARNING ASSESSMENT RECOGNITION (PLAR):

Credit can be awarded for this course through PLAR YES _____ NO X

METHODS OF OBTAINING PLAR:**TEXTBOOKS, REFERENCES, MATERIALS:**

Polymer Chemistry, 3rd Edn. - R.B. Seymour and C.E. Caraher, 1992.

SUPPLIES / MATERIALS:**STUDENT EVALUATION:**

Evaluation will be based on the following system:

First In-Term Test	20%	
Second In-Term Test		20%
Problem Sets		10%
Oral or written presentations		10%
Final Examination	40%	

COURSE CONTENT:

The course will be based on the required text (Seymour and Carraher), and chapter numbers are from the text. The course will also make use of reprinted materials.

Part a: Synthetic Polymers.

1. **Introduction.** Origins of polymer science and the polymer industry. Nomenclature and definitions.
2. **Synthesis of Polymers.** Condensation, free-radical, ionic, Ziegler-Natta and other classes of polymerization reactions. Co-polymerization reactions.
3. **Characterization of Polymers.** Polymer structure. Rheology of polymer melts and solutions. Determination of molar mass of polymers. Physical tests: stress-strain relationships, deformation mechanisms and electrical properties.
4. **Reactions of Polymers.** Reactions of polyolefins, polyenes, polyamides, pendant aliphatic and aromatic groups. Condensation and chelation reactions. Reactivity of end-groups.
5. **Inorganic Polymers.** Inorganic reaction mechanisms. Condensation organometallic polymers. Coordination polymers. Addition polymers. Portland cement, silicon dioxide, asbestos, graphite and diamond. High-temperature superconductors.

Part b: Biological Polymers.

6. **Extraction and Purification.** Chromatography, electrophoresis, ultracentrifugation and other techniques.
7. **Proteins.** The peptide bond. Primary, secondary, tertiary and quaternary structure. Enzymes, hormones and antibodies. Structural proteins: collagen, keratin, fibroin, elastin actin, myosin and chitin.
8. **Nucleic Acids.** Primary and secondary structure of deoxyribonucleic acid and ribonucleic acid. Replication and repair of deoxyribonucleic acid. Transcription and replication of ribonucleic acid. Messenger RNA and the genetic code. Mechanisms of protein synthesis. Control of nucleic acid function. Cancer and reverse transcription. Mutations. Antibiotics and nucleic acid function. Recombinant DNA.
9. **Polysaccharides.** Glycosidic and other bonds. Structures. Homopolysaccharides. Heteropolysaccharides. Glycosaminoglycans. Bacterial polysaccharides. Biosynthesis, chemical synthesis and industrial utilization of polysaccharides.
10. **Rubber and Lignin.** Rubber and gutta percha. Elasticity and structure. Biosynthesis. Chemical synthesis of polyisoprenes. Biosynthesis of lignin. Properties of lignin.
