Computer-Aided Engineering Graphics

CALENDAR DESCRIPTION:

This course covers technical sketching, orthographic projection, visualization in three dimensions, and conventions of engineering drawing. Computer-based graphics (CADD) will be introduced. The principles of descriptive geometry will be applied to the solution of space problems. This course is designed for students intending to transfer to Engineering at UBC or UVIC and emphasizes engineering practices.

LEARNING OBJECTIVES / GOALS / OUTCOMES / LEARNING OUTCOMES:
Engineering drawings are essential means of communication between designers and manufacturers of a structure or a product. Neatness, clarity of expression, and accuracy are of paramount importance. A body of standard techniques and styles has been developed to ensure this ease of communication. Upon successful completion of this course, the student will have attained a satisfactory level of competence in these basic techniques, using standard drawing methods, and using Computer-Aided Drafting (CADD).

METHODS:
Classes will consist of lecture and lab components. The lecture will describe an aspect of the course, put it in the context of a career in Engineering, and lay out the specific expectations of the students. The lab will provide an opportunity for hands-on practice of the skills described in the lecture while under supervision of the instructor.

PRIOR LEARNING ASSESSMENT RECOGNITION (PLAR):
Credit can be awarded for this course through PLAR (Please check:) ☒ Yes ☐ No

METHODS OF OBTAINING PLAR:
Please see the Physics PLAR policy on the department’s webpage
