

COURSE IMPLEMENTATION DATE:	September 1994
COURSE REVISED IMPLEMENTATION DATE:	September 2002
COURSE TO BE REVIEWED:	September 2006
(Four years after implementation date)	(MONTH YEAR format)

OFFICIAL COURSE OUTLINE INFORMATION

Students are advised to keep course outlines in personal files for future use.

Shaded headings are subject to change at the discretion of the department and the material will vary - see course syllabus available from instructor

FACULTY/DEPARTMENT:	Science/Engineering	
ENGR 152		4
COURSE NAME/NUMBER	FORMER COURSE NUMBER	UCFV CREDITS
	LINEAR ALGEBRA FOR ENGINEERING	
COURSE DESCRIPTIVE TITLE		

CALENDAR DESCRIPTION:

This course covers the solutions to linear systems of equations, vector spaces, applications to 2D and 3D geometry, linear dependence and independence, matrix algebra, determinants, orthogonal transformations and bases, application to Fourier series, eigenvalues, diagonalization, symmetric matrices, the algebra of complex numbers, the differential equations of vibrational models and linear systems of differential equations. This course is designed for students seeking a career in engineering; students intending on a BSc or BA degree are recommended to take MATH 221 instead of ENGR / MATH 152.

Note: UCFV math degrees require MATH 221, not MATH 152. Credit cannot be obtained for both MATH 152 and ENGR 152. This course is also listed as MATH 152.

PREREQUISITES:
COREQUISITES: **Pre or Corequisite: MATH 112**

SYNONYMOUS COURSE(S)	SERVICE COURSE TO:
(a) Replaces: N/A (Course #)	Physics/Engineering (Department/Program)
(b) Cannot take: ENGR 152 (Course #) for further credit.	(Department/Program)

TOTAL HOURS PER TERM: 60	TRAINING DAY-BASED INSTRUCTION
STRUCTURE OF HOURS:	LENGTH OF COURSE: _____
Lectures: 60 Hrs	HOURS PER DAY: _____
Seminar: Hrs	
Laboratory: Hrs	
Field Experience: Hrs	
Student Directed Learning: Hrs	
Other (Specify): Hrs	

MAXIMUM ENROLLMENT:	36
EXPECTED FREQUENCY OF COURSE OFFERINGS:	every winter semester
WILL TRANSFER CREDIT BE REQUESTED? (lower-level courses only)	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No
WILL TRANSFER CREDIT BE REQUESTED? (upper-level requested by department)	<input type="checkbox"/> Yes <input type="checkbox"/> No
TRANSFER CREDIT EXISTS IN BCCAT TRANSFER GUIDE:	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No

AUTHORIZATION SIGNATURES:

Course Designer(s): _____ Barry Garner	Chairperson: _____ Edith Camm (<i>Curriculum Committee</i>)
Department Head: _____ Greg Schlitt	Dean: _____ Jackie Snodgrass
PAC Approval in Principle Date: _____	PAC Final Approval Date: December 14, 2001

COURSE NAME/NUMBER**LEARNING OBJECTIVES / GOALS / OUTCOMES / LEARNING OUTCOMES:**

The successful students will be able to:

1. solve systems of linear equation;
2. perform appropriate calculations to test for the existence of a vector space, for linear dependence and independence, construct a basis for a vector space and calculate its dimension;
3. find eigenvalues and eigenvectors, especially of symmetric matrices of small dimension, and reduce to diagonal form;
4. perform the usual calculations with complex numbers including conjugacy manipulations and applications of DeMoivre's theorem;
5. apply the previous techniques to the solution of differential equations;
6. be able to derive the vibrational solutions to second-order linear differential equations with constant coefficients;
7. use the appropriate technology to perform the calculations associated with these mathematical methods.

Note: this course concentrates on Euclidean N-spaces and sub-spaces thereof.

METHODS:

Lectures, with tutorial sessions.

PRIOR LEARNING ASSESSMENT RECOGNITION (PLAR):

Credit can be awarded for this course through PLAR (Please check :) Yes No

METHODS OF OBTAINING PLAR:

Course challenge

TEXTBOOKS, REFERENCES, MATERIALS:

[Textbook selection varies by instructor. An example of texts for this course might be:]

Recent texts:

Kreuzig, E. and Wiley, J. *Advanced Engineering Mathematics*. 8th edition.

Zill, D. and Kent, PWS. *A First Course in Differential Equations with Applications*. (Chapter 5, Vibrational Models)

Anton, H. and Wiley, J. *Elementary Linear Algebra*. 8th edition.

SUPPLIES / MATERIALS:**STUDENT EVALUATION:**

[An example of student evaluation for this course might be:]

Assignments & quizzes	25%
Mid-term examinations (2)	30%
Final examination	45%

Students must achieve at least 40% on the final exam in order to receive credit for this course.

COURSE CONTENT:

[Course content varies by instructor. An example of course content might be:]

Use of graphing calculator and/or C.A.S. expected.

Most examples and demonstrations will be in terms of 2- and 3-dimensions.

1. Linear systems of equations; row-reduced echelon form, rank.
2. Vector space, dot product, vector product (in 3D); applications to 2D and 3D geometry.
3. Matrix algebra, elementary matrices, inverses, transposes.
4. Matrix form of geometrically defined linear transformations.

5. Properties of determinants.
6. Linear dependence and independence, span, dimension.
7. Orthogonal transformations, orthonormal basis.
8. Orthogonal transformations, orthonormal basis.
9. Algebra of complex numbers, De Moivre's theorem, $\exp(z)$, $\ln(z)$, principal value, $\exp(w \ln(z))$.
10. Eigenvalues / -vectors, diagonalization, symmetric matrices.
11. Second order linear differential equations with constant coefficients, vibrational models.
12. Linear systems of differential equations, diagonalizable case, 2×2 nondiagonalizable case.
13. Fourier series.
