**CALENDAR DESCRIPTION:**

Most mathematical models of a physical process are in the form of differential equations. This course provides various techniques and ideas in solving ordinary differential equations with an emphasis on applications. Graphing calculators and Maple are used in this course. Topics include first- and second-order linear differential equations, non-linear equations, series solutions, Laplace transform methods, and linear systems.

Note: This course is also offered as MATH 255. Students can receive credit for only one of MATH 255 and ENGR 255.

**PREREQUISITES:**

MATH 112  

**COREQUISITES:**

Prerequisites or Corequisites: MATH 211 and one of MATH 152, MATH 221, PHYS 221.

**SYNONYMOUS COURSE(S)**

(a) Replaces:  

(b) Cannot take: MATH 255 for further credit.

**AUTHORIZATION SIGNATURES:**

Course Designer(s): David Chu / Erik Talvila  

Chairperson: Gillian Mimmack (Curriculum Committee)

Department Head: Norm Taylor  

Dean: Jacalyn Snodgrass

UPAC Approval in Principle Date: UPAC Final Approval Date: May 26, 2006
LEARNING OBJECTIVES / GOALS / OUTCOMES / LEARNING OUTCOMES:

The main objectives of this course are (i) to provide various techniques and ideas in solving ordinary differential equations and (ii) to use technology to solve mathematical models in the form of differential equations.

The successful student will be able to:
1. solve first-order linear differential equations by recognizing the equations as separable and/or exact;
2. understand and apply the Existence and Uniqueness Theorem;
3. construct and solve first-order difference equations with applications;
4. solve second-order homogeneous linear equations with constant coefficients, find the fundamental solutions, test linear independence and calculate Wronskian;
5. solve second-order nonhomogeneous equations by the method of undetermined coefficients and variation of parameters;
6. derive, solve and interpret vibrational models;
7. find series solutions of second-order linear equations near an ordinary point and a regular point;
8. understand the idea of Laplace transform and apply to different elementary functions, solve differential equations involving step functions and impulse functions;
9. solve homogeneous linear systems with constant coefficients;
10. formulate mathematical models and use technology to solve them.

METHODS:

Lectures and demonstration of Maple in computer lab.

PRIOR LEARNING ASSESSMENT RECOGNITION (PLAR):

Credit can be awarded for this course through PLAR (Please check:)  ☒ Yes  ☐ No

METHODS OF OBTAINING PLAR:

Please see the Physics PLAR policy on the department’s webpage

TEXTBOOKS, REFERENCES, MATERIALS:

[Textbook selection varies by instructor. An example of texts for this course might be:]

The text is chosen by a departmental curriculum committee.

The suggested texts are as follows:

<td>15%</td>
</tr>
<tr>
<td>Quizzes</td>
<td>15%</td>
</tr>
<tr>
<td>Tests</td>
<td>30%</td>
</tr>
<tr>
<td>Final Examination</td>
<td>40%</td>
</tr>
</tbody>
</table>

Students must achieve at least 40% on the final exam in order to receive credit for this course.

COURSE CONTENT:

[Course content varies by instructor. An example of course content might be:]

Use of graphing calculator and Maple is expected.

1. Direction fields, mathematical models.
2. First-order linear and non-linear differential equations, separable equations, autonomous equations, population dynamics, exact equations, integrating factors.
3. The Existence and Uniqueness Theorem (without proof).
4. First-order difference equations.
5. Second-order homogeneous linear equations with constant coefficients, linear independence, Wronskian, characteristic equation.
7. Series solutions near an ordinary point and a regular singularity, Euler equations.
8. Laplace transform, step functions, discontinuous forcing functions, impulse functions.
