COURSE DESCRIPTIVE TITLE		

**CALENDAR DESCRIPTION:**

This course introduces the concepts and methods of economic geography. The focus is on the spatial distribution and interactions of population, natural resources and energy, manufacturing, and services in the capitalist economy. Emphasis will be placed on the geographies of innovation, competition, and inequality; industrialization and development; firm location decisions; and the evolution of particular kinds of economic landscapes at local, national, and international scales. Field trips outside of class time may be required. Please refer to department website for field trip scheduling information.

**LEARNING OUTCOMES:**

Upon successful completion of this course, students will be able to:

1. Use the methods and theories of economic geography to comprehend the inherently geographical character of capitalism.
2. Analyze the ways in which a globalizing capitalist mode of production and firm behaviour and decision-making models create uneven landscapes of accumulation at local, national, and international scales.
3. Identify the ways in which value is added to commodities, and what this entails for how resource-dependent regions develop.
4. Use primary and secondary data to determine the factors involved in the location of particular economic activities in a local and regional context.
5. Collaborate with peers to devise a research question and process.
6. Present original research as part of a research poster or research essay.

**METHODS:** *(Guest lecturers, presentations, online instruction, field trips, etc.)*

The course is taught in a lecture/seminar format. Lectures draw on material from the text and are supported by directed readings and films in a seminar format. A field experience in the reading and interpretation of economic landscapes will be included.
