

COURSE IMPLEMENTATION DATE: September 1990
 COURSE REVISED IMPLEMENTATION DATE: January 2011
 COURSE TO BE REVIEWED: December 2012
(four years after UPAC approval) (month, year)

OFFICIAL UNDERGRADUATE COURSE OUTLINE INFORMATION

Students are advised to keep course outlines in personal files for future use.
 Shaded headings are subject to change at the discretion of the department – see course syllabus available from instructor

MATH 106	SCIENCE/MATHEMATICS & STATISTICS	4
COURSE NAME/NUMBER	FACULTY/DEPARTMENT	UFV CREDITS
	STATISTICS I	
	COURSE DESCRIPTIVE TITLE	

CALENDAR DESCRIPTION:

This course is an introduction to descriptive statistics, sampling, probability, estimation, hypothesis testing, correlation, regression, and analysis of variances. This course is similar to MATH 104, but includes multiple regression, one-way ANOVA, and a more detailed discussion of probability results. Facility with Grade 12 level algebra is expected, but no calculus is required. As a general rule, students with Math 11 are expected to take MATH 104, those with Math 12 are expected to take MATH 106, and those with a full year of calculus are expected to take MATH 270.

Before registering, students should check the requirements of their program. UFV mathematics degrees require MATH 270. While MATH 106 is not equivalent to MATH 270, students with credit for MATH 270 are not allowed to take MATH 106. Those with credit for MATH 106 may subsequently take MATH 270 in order to satisfy the requirements for a math degree.

PREREQUISITES: One of the following: C or better in one of Principles of Math 12, Applications of Math 12, Foundations of Mathematics 12, Precalculus 11, MATH 110, MATH 124, or MATH 140; or C or better in both MATH 094 and MATH 095; or Precalculus 12.

COREQUISITES: None

PRE or COREQUISITES:

SYNONYMOUS COURSE(S):

- (a) Replaces: N/A
- (b) Cross-listed with: _____
- (c) Cannot take: See above for further credit.

SERVICE COURSE TO: *(department/program)*

Business Administration

Biology

TOTAL HOURS PER TERM: 75

STRUCTURE OF HOURS:

Lectures: 75 Hrs
 Seminar: _____ Hrs
 Laboratory: _____ Hrs
 Field experience: _____ Hrs
 Student directed learning: _____ Hrs
 Other (specify): _____ Hrs

TRAINING DAY-BASED INSTRUCTION:

Length of course: _____
 Hours per day: _____

OTHER:

Maximum enrolment: 36
 Expected frequency of course offerings: _____
(every semester, annually, every other year, etc.)

WILL TRANSFER CREDIT BE REQUESTED? (lower-level courses only) Yes No
WILL TRANSFER CREDIT BE REQUESTED? (upper-level requested by department) Yes No
TRANSFER CREDIT EXISTS IN BCCAT TRANSFER GUIDE: Yes No

Course designer(s): Stats Committee	Date approved: September 1, 2010
Department Head: Greg Schlitt	Date of meeting: September 17, 2010
Supporting area consultation (Pre-UPAC)	Date approved: September 24, 2010
Curriculum Committee chair: Norm Taylor	Date approved: October 21, 2010
Dean/Associate VP: Ora Steyn	Date of meeting: October 29, 2010
Undergraduate Program Advisory Committee (UPAC) approval	

LEARNING OUTCOMES:

Upon successful completion of this course, students will be able to:

1. Construct frequency tables, histograms and cumulative frequency diagrams, scatter diagrams, and regression lines from raw data by the use of appropriate technology;
2. Obtain simple measures of location and dispersion, correlation, and regression from the data, and interpret the same;
3. Solve simple problems in probability requiring knowledge of conditional probability and statistical independence;
4. Use simple mathematical models for commonly occurring situations such as sampling with replacement, and commercial or biological measurements;
5. Apply Pearson's chi-square statistic to draw inferences in appropriate categorical sampling situations;
6. Apply and interpret multiple regression models and the associated Analysis of Variance (ANOVA) tables;
7. Use indicator (dummy) variables with categorical data so to apply the methods of multiple regression.

METHODS: *(Guest lecturers, presentations, online instruction, field trips, etc.)*

Lectures, mixed with sessions in the computer lab.

METHODS OF OBTAINING PRIOR LEARNING ASSESSMENT RECOGNITION (PLAR):

- Examination(s) Portfolio assessment Interview(s)
- Other (specify): Please check online at <http://www.ufv.ca/math/challenge.htm> for the departmental challenge policy
- PLAR cannot be awarded for this course for the following reason(s):

TEXTBOOKS, REFERENCES, MATERIALS: *[Textbook selection varies by instructor. Examples for this course might be:]*

The text is chosen by a departmental curriculum committee. Recent text:
McClave and Sincich. Statistics. 8th edition. Prentice-Hall.

SUPPLIES / MATERIALS:

A scientific calculator with statistical functions is required.

STUDENT EVALUATION: *[An example of student evaluation for this course might be:]*

Assignments and quizzes	20-30%
Mid-term examinations (2)	30-40%
Final examination	40-45%

Students must achieve at least 40% on the final exam in order to receive credit for this course.

COURSE CONTENT: *[Course content varies by instructor. An example of course content might be:]*

1. Introduction to statistical concepts, e.g. variation; and software, e.g. MINITAB, Excel, Quattro-Pro.
2. Descriptive statistics:
Frequency tables, histograms, cumulative frequencies, etc.
Measures of location, e.g. mean, median, mode; and scale, e.g. standard deviation, quantiles.
Linear transformations.
Bivariate data, correlation, linear regression, least squares, the analysis of variance table, interpretation of computer output.
3. Probability:
Two-way tables, Venn and tree diagrams; joint, marginal and conditional probability.
Independence and dependence. Bayes' Theorem.
Counting rules.
Simple models for discrete random variables, sampling with and without replacement.
Expectation, mean, variance and standard deviation.
The normal distribution, standardization, linear transformations.
The chi-square probability distribution.
Random sampling, simulation, especially as applied to limit theorems, e.g. the Central Limit Theorem.
4. Inferential statistics: estimation, confidence intervals and tests of hypothesis.
These techniques applied to proportions, rates and means for one and two populations.
Pearson's chi-square statistic applied to a variety of problems, e.g. goodness-of-fit, independence in a two-way table, equality of binomial proportions, comparison of related proportions, comparison of rates.
The Student 't' and Fisher's 'F' probability distributions.
Comparison of the means of several populations the one-way ANOVA table.
Confidence intervals and test of hypothesis about the slope in simple linear regression.
Multiple regression, interpretation of the equation, R-square, the ANOVA table
