NON-CALCULUS PHYSICS
COURSE DESCRIPTIVE TITLE

CALENDAR DESCRIPTION:

Though suitable for all science students, this course is of particular interest to students taking biology and chemistry. Topics include: thermodynamics, waves, geometric and wave optics, electricity and instrumentation, and an introduction to quantum phenomena. This course can be taken by students who only need one non-calculus physics course, and already have Grade 12 physics, or can be the second half of a full-year non-calculus program. The course can also be used in combination with Physics 111 as an entry into a UCFV physics major, although Physics 111 and 112 is the preferred route.

Note: Both PHYS 101 and PHYS 105 are often required for transfer.

PREREQUISITES: **Principles of Math 12 and Physics 11. One of: Physics 12 or PHYS 101 or PHYS 111 highly recommended.**

LEARNING OBJECTIVES / GOALS / OUTCOMES / LEARNING OUTCOMES:

This course emphasizes the physics of greatest importance in the life sciences, and also serves as an overview of several topics for students interested in physics.
Students should be able to successfully understand:

1. Understand the fundamental laws behind the topics covered in the course
2. Apply physics principles to everyday situations involving these topics
3. Perform fundamental laboratory experiments, and interpret the data obtained
4. Develop a feeling for the order of magnitude of physical quantities in real experiments

METHODS:

Lecture, demonstration, small group practice, discussion, and laboratory.

PRIOR LEARNING ASSESSMENT RECOGNITION (PLAR):

Credit can be awarded for this course through PLAR (Please check :) ☒ Yes ☐ No

METHODS OF OBTAINING PLAR:

Course challenge plus evidence of having appropriate laboratory skills.
