CALENDAR DESCRIPTION:

This introductory optics course surveys both geometrical and wave optics. Topics will include laws of reflection and refraction; interference and diffraction, fourier methods and holography.

PREREQUISITES: PHYS 222 or (PHYS 105, 112 and 221)

COREQUISITES:

SYNONYMOS COURSE(S) SERVICE COURSE TO:
(a) Replaces: n/a (Course #) (Department/Program)
(b) Cannot take: n/a (Course #) for further credit.

TOTAL HOURS PER TERM: 75 TRAINING DAY-BASED INSTRUCTION
Lectures: 75 Hrs LENGTH OF COURSE:
Seminar: Hrs HOURS PER DAY:
Laboratory: Hrs
Field Experience: Hrs
Student Directed Learning: Hrs
Other (Specify): Hrs

MAXIMUM ENROLLMENT: 24 EXPECTED FREQUENCY OF COURSE OFFERINGS:
WILL TRANSFER CREDIT BE REQUESTED? (lower-level courses only) Yes No
WILL TRANSFER CREDIT BE REQUESTED? (upper-level requested by department) Yes No
TRANSFER CREDIT EXISTS IN BCCAT TRANSFER GUIDE: Yes No

COURSE IMPLEMENTATION DATE: January 1995
COURSE REVISED IMPLEMENTATION DATE: September 2006
COURSE TO BE REVIEWED: November 2009 (Four years after UPAC final approval date)

AUTHORIZATION SIGNATURES:

Course Designer(s): Chairperson: Gillian Mimmack (Curriculum Committee)
R. Woodside; revised P. Mulhern

Department Head: Dean: Jackie Snodgrass
Norm Taylor

UPAC Approval in Principle Date: UPAC Final Approval Date: December 14, 2005
LEARNING OBJECTIVES / GOALS / OUTCOMES / LEARNING OUTCOMES:

Outcomes:

Students should be capable of:

1. Solving problems in geometric optics.
2. Being conversant with aberrations of lenses.
3. Solving problems in wave optics including single and multiple beam interference, and near and far field diffraction.
4. Have an understanding from various topics in modern optics which could include: Fourier optics, Coherence Theory, laser operation, or fiber optics.
5. Solving various problems in each of the topic areas listed in the Calendar Description section.

Objectives:

This course provides both an overview of elementary optics and in-depth analysis of selected advanced topics.

In geometric optics, thin lens and mirror equations in the paraxial approximation will be covered. Advanced geometric optic topics of thick lenses, matrix methods, and aberrations may be discussed.

In wave optics, Young's double-slit interference and Fraunhofer diffraction will be covered. Additionally, multiple beam interference, dielectric mirrors, Fresnel equations, Fresnel diffraction, Coherence Theory, and polarization may be discussed.

METHODS:

The course will be taught using lectures, demonstrations, and computer simulations. Problems will be assigned and marked on a regular basis.

PRIOR LEARNING ASSESSMENT RECOGNITION (PLAR):

Credit can be awarded for this course through PLAR (Please check:) ☑ Yes ☐ No

METHODS OF OBTAINING PLAR:

Departmental Review and/or Course Challenge

TEXTBOOKS, REFERENCES, MATERIALS:

[Textbook selection varies by instructor. An example of texts for this course might be:]

TEXTS: Optics, 4th ed.; E. Hecht; Addison Wesley (1987)

References: Optics, 2nd ed.; M.V. Klein, T.E. Furtak; Wiley and Sons (1986)
Introduction to Optics; F.L. Pedrotti, L.S. Pedrotti; Prentice Hall (1987)

SUPPLIES / MATERIALS:

STUDENT EVALUATION:

[An example of student evaluation for this course might be:]

Assignments 20%
Midterm Examination 30%
### COURSE CONTENT:

[Course content varies by instructor. An example of course content might be:]
