DIGITAL ELECTRONICS LABORATORY

COURSE DESCRIPTIVE TITLE

CALENDAR DESCRIPTION:

Physics 372 is the laboratory portion of the digital electronics course, Physics 362. The experiments done in this course are designed to provide students with practical experience using, testing, and designing digital logic circuits. The experiments are closely related to the material covered in the classroom. This course emphasizes design and assembly of circuits with discrete gates, interfacing these circuits directly to microprocessors, and using industrial production tools for practical applications.

Note: Students with credit for PHYS 472 cannot take this course for further credit.

LEARNING OBJECTIVES / GOALS / OUTCOMES / LEARNING OUTCOMES:

The experiments in this course are designed to provide students with:
1. the practical experience in using the basic digital gates;
2. digital design experience and how these circuits perform binary mathematics;
3. practical experience in using IC chips
4. the ability to interface digital circuits with common microprocessors

METHODS:

The experiments used in this course will be closely tied to the material covered in the lectures. The laboratory is meant to be an integral part of the classroom portion of the course—it should not be thought of as a separate part of the course. The experiments are needed to provide the practical experience with the logic circuits studied in the classroom. The unique combination of classroom theory, VHDL, computer simulation, and practical experience should provide the students with the necessary knowledge and the experience to design and test digital electronic circuits. Experiments on computer interfacing will be assigned. Students after successfully completing this course will have a good understanding of digital electronics, microprocessors, computer architecture, and computer interfacing.

PRIOR LEARNING ASSESSMENT RECOGNITION (PLAR):

Credit can be awarded for this course through PLAR (Please check:) ☒ Yes ☐ No

STUDENT EVALUATION:

[An example of student evaluation for this course might be:]

The final grade will be awarded on the total number of points earned. There are 21 labs, each marked out of 10, a project worth 60 points, and a final exam worth 30 points, for a total maximum of 300 points. Extra projects can be done for additional credit.

The marks awarded will be based on the number of points awarded.
