OFFICIAL COURSE OUTLINE INFORMATION

Students are advised to keep course outlines in personal files for future use. Shaded headings are subject to change at the discretion of the department and the material will vary - see course syllabus available from instructor.

FACULTY/DEPARTMENT: Faculty of Science, Health & Human Services/Physics

PHYS 372

COURSE NAME/NUMBER

PHYS 472

FORMER COURSE NUMBER

UFV CREDITS

DIGITAL ELECTRONICS LABORATORY

COURSE DESCRIPTIVE TITLE

CALENDAR DESCRIPTION:

Physics 372 is the laboratory portion of the digital electronics course, Physics 362. The experiments done in this course are designed to provide students with practical experience using, testing, and designing digital logic circuits. The experiments are closely related to the material covered in the classroom. This course emphasizes design and assembly of circuits with discrete gates, interfacing these circuits directly to microprocessors, and using industrial production tools for practical applications.

Note: Students with credit for PHYS 472 cannot take this course for further credit.

PREREQUISITES: PHYS 232

COREQUISITES:

PRE OR CO-REQUISITES: PHYS 362

SYNONYMOUS COURSE(S)

(a) Replaces: PHYS 472

(b) Cannot take: n/a for further credit.

TOTAL HOURS PER TERM: 45

TRAINING DAY-BASED INSTRUCTION

STRUCTURE OF HOURS:

Lectures: Hrs

Seminar: Hrs

Laboratory: 45 Hrs

Field Experience: Hrs

Student Directed Learning: Hrs

Other (Specify): Hrs

MAXIMUM ENROLLMENT: 24

EXPECTED FREQUENCY OF COURSE OFFERINGS: Once every 2 or 3 years

WILL TRANSFER CREDIT BE REQUESTED? (lower-level courses only) ☑ Yes ☐ No

WILL TRANSFER CREDIT BE REQUESTED? (upper-level requested by department) ☑ Yes ☐ No

TRANSFER CREDIT EXISTS IN BCCAT TRANSFER GUIDE: ☑ Yes ☐ No

AUTHORIZED SIGNATURES:

Course Designer(s): George McGuire; revised P. Mulhern

Chairperson: Gillian Mimmack (Curriculum Committee)

Department Head: Norm Taylor

Dean: Dan Ryan

UPAC Approval in Principle Date: ☐ Yes ☐ No

UPAC Final Approval Date: February 26, 2010
LEARNING OBJECTIVES / GOALS / OUTCOMES / LEARNING OUTCOMES:
The experiments in this course are designed to provide students with:
1. the practical experience in using the basic digital gates;
2. digital design experience and how these circuits perform binary mathematics;
3. practical experience in using IC chips
4. the ability to interface digital circuits with common microprocessors

METHODS:
The experiments used in this course will be closely tied to the material covered in the lectures. The laboratory is meant to be an integral part of the classroom portion of the course—it should not be thought of as a separate part of the course. The experiments are needed to provide the practical experience with the logic circuits studied in the classroom. The unique combination of classroom theory, VHDL, computer simulation, and practical experience should provide the students with the necessary knowledge and the experience to design and test digital electronic circuits. Experiments on computer interfacing will be assigned. Students after successfully completing this course will have a good understanding of digital electronics, microprocessors, computer architecture, and computer interfacing.

PRIOR LEARNING ASSESSMENT RECOGNITION (PLAR):
Credit can be awarded for this course through PLAR (Please check:) ☒ Yes ☐ No

METHODS OF OBTAINING PLAR:
Please see the Physics PLAR policy on the department’s webpage

SUPPLIES / MATERIALS:
Fully-equipped physics lab

STUDENT EVALUATION:
[An example of student evaluation for this course might be:]
The final grade will be awarded on the total number of points earned. There are 21 labs, each marked out of 10, a project worth 60 points, and a final exam worth 30 points, for a total maximum of 300 points. Extra projects can be done for additional credit.
The marks awarded will be based on the number of points awarded.

COURSE CONTENT:
[Course content varies by instructor. An example of course content might be:]
Introduction; techniques, lab manuals, data analysis

Lab 0: Measurement Techniques
Lab 1: Basic Gates
Lab 2: Combinations of Gates
Lab 3: Diode and Transistor Logic
Lab 4: Simple Op-Amp Amplifier
Lab 5: Loading a Gate
Lab 6: Frequency Response of a Gate
Lab 7: Schmitt Trigger
Lab 8: Mini-Project
Lab 9: Monostable Multivibrators
Lab 10: Astable Multivibrators
Lab 11: RS and D Flip-Flops
Lab 12: JK Flip-Flops
Lab 13: Encoders and Decoders; 7 Segment Display
Lab 14: Multiplexer

Project (Work Day #1)
Lab 15: Counters
Lab 16: Adders

Project (Work Day #2)
Lab 17: A/D test circuit
Lab 18: Computer Interface of A/D
Lab 19: Game Port Access
Lab 20: Printer Port Access

Project (Work Day #3)
