LEARNING OBJECTIVES / GOALS / OUTCOMES / LEARNING OUTCOMES:
This course is designed to provide students with:
1. An appreciation of the importance of nonlinear phenomena in the everyday world;
2. Symbolic computational skills that are needed for employment in a highly technical society;
3. Useful problem solving and critical thinking skills;
4. The skills needed to tackle problems in a variety of non-scientific disciplines;
5. An understanding of the capabilities and limitations of symbolic computational software;
6. A skill which makes them employable.

METHODS:
This course will be presented using demonstrations, experiments, and computer simulations. Heavy reliance will be made of the computer to simulate, model, animate, and test the text's experimental nonlinear models. The students will be introduced to models not only from the physical sciences (biology, chemistry, and physics), but from the humanities, medical and business.

PRIOR LEARNING ASSESSMENT RECOGNITION (PLAR):
Credit can be awarded for this course through PLAR (Please check:) ☒ Yes ☐ No

METHODS OF OBTAINING PLAR:
Departmental Review and/or Course Challenge
