

ORIGINAL COURSE IMPLEMENTATION DATE: May 1994  
 REVISED COURSE IMPLEMENTATION DATE: September 2021  
 COURSE TO BE REVIEWED (six years after UEC approval): November 2025  
 Course outline form version: 05/18/2018

## OFFICIAL UNDERGRADUATE COURSE OUTLINE FORM

Note: The University reserves the right to amend course outlines as needed without notice.

<b>Course Code and Number:</b> STAT 330	<b>Number of Credits:</b> 3 <a href="#">Course credit policy (105)</a>														
<b>Course Full Title:</b> Design of Experiments <b>Course Short Title:</b> <i>(Transcripts only display 30 characters. Departments may recommend a short title if one is needed. If left blank, one will be assigned.)</i>															
<b>Faculty:</b> Faculty of Science	<b>Department (or program if no department):</b> Mathematics & Statistics														
<b>Calendar Description:</b> Designing experiments, including factorial, $2^k$ , fractional and blocked experiments, confounding, fixed effects, random effects, mixed effects models, variance components. Statistical software is used for data analysis. Students design their own experiments and write a report on the resulting collection and analysis of data.															
<b>Prerequisites (or NONE):</b>	One of the following: STAT 104 with a B+ or better, STAT 106 with a B or better, STAT 270, or STAT 271.														
<b>Corequisites (if applicable, or NONE):</b>															
<b>Pre/corequisites (if applicable, or NONE):</b>															
<b>Antirequisite Courses</b> <i>(Cannot be taken for additional credit.)</i> Former course code/number: <b>MATH 330</b> Cross-listed with: Dual-listed with: Equivalent course(s): <i>(If offered in the previous five years, antirequisite course(s) will be included in the calendar description as a note that students with credit for the antirequisite course(s) cannot take this course for further credit.)</i>	<b>Special Topics</b> <i>(Double-click on boxes to select.)</i> This course is offered with different topics: <input checked="" type="checkbox"/> No <input type="checkbox"/> Yes <i>(If yes, topic will be recorded when offered.)</i> <b>Independent Study</b> If offered as an Independent Study course, this course may be repeated for further credit: <i>(If yes, topic will be recorded.)</i> <input checked="" type="checkbox"/> No <input type="checkbox"/> Yes, repeat(s) <input type="checkbox"/> Yes, no limit <b>Transfer Credit</b> Transfer credit already exists: <i>(See <a href="#">bctransferguide.ca</a>.)</i> <input type="checkbox"/> No <input checked="" type="checkbox"/> Yes Submit outline for (re)articulation: <input checked="" type="checkbox"/> No <input type="checkbox"/> Yes <i>(If yes, fill in transfer credit form.)</i> <b>Grading System</b> <input checked="" type="checkbox"/> Letter Grades <input type="checkbox"/> Credit/No Credit <b>Maximum enrolment (for information only):</b> 36 <b>Expected Frequency of Course Offerings:</b> Every 2nd year <i>(Every semester, Fall only, annually, etc.)</i>														
<b>Typical Structure of Instructional Hours</b> <table border="1" style="width: 100%; border-collapse: collapse; margin-top: 10px;"> <tr> <td style="width: 80%;">Lecture/seminar hours</td> <td style="width: 20%; text-align: center;">40</td> </tr> <tr> <td>Tutorials/workshops</td> <td></td> </tr> <tr> <td>Supervised laboratory hours</td> <td style="text-align: center;">10</td> </tr> <tr> <td>Experiential (field experience, practicum, internship, etc.)</td> <td></td> </tr> <tr> <td>Supervised online activities</td> <td></td> </tr> <tr> <td>Other contact hours:</td> <td></td> </tr> <tr> <td style="text-align: right;"><b>Total hours</b></td> <td style="text-align: center;"><b>50</b></td> </tr> </table>		Lecture/seminar hours	40	Tutorials/workshops		Supervised laboratory hours	10	Experiential (field experience, practicum, internship, etc.)		Supervised online activities		Other contact hours:		<b>Total hours</b>	<b>50</b>
Lecture/seminar hours	40														
Tutorials/workshops															
Supervised laboratory hours	10														
Experiential (field experience, practicum, internship, etc.)															
Supervised online activities															
Other contact hours:															
<b>Total hours</b>	<b>50</b>														
Labs to be scheduled independent of lecture hours: <input checked="" type="checkbox"/> No <input type="checkbox"/> Yes															
<b>Department / Program Head or Director:</b> Ian Affleck	<b>Date approved:</b> June 15, 2020														
<b>Faculty Council approval</b>	<b>Date approved:</b> September 11, 2020														
<b>Dean/Associate VP:</b> Lucy Lee	<b>Date approved:</b> September 11, 2020														
<b>Campus-Wide Consultation (CWC)</b>	<b>Date of posting:</b> n/a														
<b>Undergraduate Education Committee (UEC) approval</b>	<b>Date of meeting:</b> January 29, 2021														

**Learning Outcomes:**

Upon successful completion of this course, students will be able to:

1. Use one-factor, two-factor and higher order factorial designs.
2. Explain the reasoning and importance of the basic experimental practices of randomization, blocking, confounding, and replication.
3. Use fixed effects, random effects, and mixed effects models and demonstrate the differences.
4. Use designs with blocking factors.
5. Use  $2^k$  designs, including blocked and fractional  $2^k$  designs.
6. Identify the alias structure and resolution of fractional  $2^k$  designs.
7. Use a statistical software package to analyze data from all experiments.
8. Design an experiment, collect the data, analyze the data, and write a report, including recommendations for future research.
9. Integrate feedback and suggestions from faculty and supervisors in completion and presentation of report findings.

**Prior Learning Assessment and Recognition (PLAR)**

Yes       No, PLAR cannot be awarded for this course because

**Typical Instructional Methods** (*Guest lecturers, presentations, online instruction, field trips, etc.; may vary at department's discretion.*)

Lectures, computer work, discussion both in and out of class, group work for project.

**NOTE: The following sections may vary by instructor. Please see course syllabus available from the instructor.**

**Typical Text(s) and Resource Materials** (*If more space is required, download Supplemental Texts and Resource Materials form.*)

The textbook is chosen by a departmental curriculum committee. Recent texts used:

Author (surname, initials)	Title (article, book, journal, etc.)	Current ed.	Publisher	Year
1. Montgomery, D.C.	<i>Design and Analysis of Experiments, 9<sup>th</sup> ed.</i>	<input type="checkbox"/>	Wiley	2017

**References**

2	Box, G.E.P., Hunter, W.G. and Hunter, J.S.	<i>Statistics for Experimenters. 2<sup>nd</sup> ed.</i>	<input type="checkbox"/>	Wiley	2005
3.	Fleiss, Joseph L.	<i>The Design and Analysis of Clinical Experiments</i>	<input type="checkbox"/>	Wiley	1999
4.	Crowder, M.J. and Hand.	<i>Analysis of Repeated Measures</i>	<input type="checkbox"/>	Chapman and Hall	1990
5.	Cox, D.R.	<i>The Design of Experiments</i>	<input type="checkbox"/>	Wiley	1957

**Required Additional Supplies and Materials** (*Software, hardware, tools, specialized clothing, etc.*)**Typical Evaluation Methods and Weighting**

Final exam:	45%	Assignments:	10%	Field experience:	%	Portfolio:	%
Midterm exam:	15%	Project:	10%	Practicum:	%	Other:	5%
Quizzes/tests:	15%	Lab work:	%	Shop work:	%	Total:	100%

**Details (if necessary):**

The above percentages may vary among instructors and years. The final exam is comprehensive. Students must obtain at least 40% on the final exam in order to receive credit for this course.

**Typical Course Content and Topics**

- Linearity: the assumptions of a linear model, linear effects and a linear error term. Randomisation.
- Experiments with one factor, fixed effects, random effects, estimation of model parameters, ANOVA, multiple comparisons.
- Blocked designs: matched pairs, randomised complete blocks, Latin squares, multiple Latin squares, Graeco-Latin squares, balanced incomplete blocks.
- Factorial designs:  $2^k$  designs. Yates' plussing and minussing, Daniels' method of plotting to select contrasts of interest in saturated designs.
- Blocking in  $2^k$  designs, fractional factorial designs, confounding and aliasing. Selecting a fractional factorial design, implications of the selection, replication. Designs of Resolution R.
- Variance components: variance component models in balanced designs, construction of appropriate models, interpretation of tests, confidence intervals for fixed effects.
- If time allows: Response surface methods: use and estimation of local quadratic approximations, the search for an optimum.
- Cross-over designs: conditions under which they are appropriate, analysis and interpretation.
- Split-plot designs: common repeated measure designs and corresponding uni-variate models and analysis.
