

An After-School Science Club!

Super Science Club (SSC) provides students in local schools the opportunity to participate in a hands-on science club. Our goal is to provide students in grades 1-6 with engaging after school STEM experiences through exciting demonstrations, hands on investigations, active games and more!

Weekly Club:

SSC runs for 1 hour and 15 minutes once a week for 4-5 weeks. We can run primary sessions for students in grades 1-3 and/or intermediate sessions for grades 4-6, for up to 16 students (up to 20 students if a teacher's aide is present). The program covers 4-5 weeks of activities led by 2 UFV science students trained by Science World staff.

2025-26 Topics:

- How to Science –*Observing, predicting, and testing*
- Illusions –*Receiving and perceiving sensory information*
- Astronomy –*Explore the environment of outer space*
- Lungs and Respiration –*Life essentials: gas exchange and immune responses*
- Scrappy Gardening – *Our connection with plants*

Science World Family Membership:

If students have good attendance and uphold the SSC code of conduct, they receive a one-year family membership to Science World at the end of the program! These memberships are for immediate family only, up to 2 adults and 4 children per membership. If two children in SSC are siblings, they will receive only one membership for their family.

Family Science Night:

Science world opens its doors to families of current Super Science Club participants, their teachers and site liaisons for one evening at the end of each term. There are science activities, demonstrations and all of Science World's exhibits to explore.

To set up a Super Science Club at your school or centre, contact:
